Sustainability Policy

Policy:

The sustainability goal for Facilities Management is to expand and improve the physical campus infrastructure and appearance to create and facilitate a clean living and learning environment with focus on environmental responsibility. We will collect all administrative paper waste and properly discard of such material in a way that promotes cleanliness and the sustainability mindset. All metal waste will be collected and turned in to the Mississippi State Surplus or sold to local recycling companies to generate funds for the University. We will research and implement improvements in building products or systems which will serve to better utilize, institute human and financial resources (i.e. energy saving systems and labor-saving products and methods).
